MISSING NUMBERS.

Subscribers are requested to look over their files; and, if numbers are missing, to apply for these **at once.** Complete sets of OPHTHALMIC LITERATURE will be valuable, as its Index of Ophthalmology contains a larger number of titles of articles bearing on this department of medicine than any similar index published in any language.

INDEXES.

In the attempt to make OPHTHALMIC LITERATURE the most complete and convenient means of reaching any particular paper or class of papers referring to ophthalmology, we again present indexes to its contents, that may seem rather elaborate for the size of the journal. But the reader who has a proper respect for economy of time will appreciate their value.

The **index of authors'** names requires little explanation, except that the figures in brackets refer not to original papers, but to translations or abstracts of these, generally more accessible to our readers. The general subject of indexing authors' names has been previously discussed, Volume I, p. 45. Differences in national custom make it a somewhat difficult problem. The general rule is to follow the plan adopted in the indexes of journals in which the contributions originally appear.

In using the **index of subjects** one should remember that to index every word would make an index larger than the original book. A subject may be adequately represented in the index, and yet a certain reader may not find it where he looks for it. Thus, to use our old illustration, "absorption of cataract," is not mentioned under "A"; but under the general heading of "Cataract" we find "absorption, 56, 71, etc. An index should be as complete as possible, and yet the larger it is, the less readily is it consulted.

BOOK NOTICES.

In the brief notices of books published in OPHTHALMIC LITERATURE it is impossible to give all the interesting and important

things that might be said about them, or even all that are said about them in the different reviews they receive from various journals. We therefore give in the subjoined list references to all the more important books that have been reviewed in ophthalmic journals during the year, with the journal and page of such review; and to some that have not been noticed in any ophthalmic publication.
